Revised 07/2021

What you need to know about The Maryland Poison Center

Here are some facts that may surprise you:

- Each year, more than 900,000 suspected poisoning exposures in children younger than six years old are reported to poison centers across the country.
- Approximately 30,000 poisonings and overdoses are reported to the Maryland Poison Center every year.

The Maryland Poison Center (MPC) provides emergency assessment of poison exposures, treatment recommendations, education, and prevention information to the majority of Maryland's residents. Our service area covers the state of Maryland with the exception of Prince George's and Montgomery counties. Established as a service of the University of Maryland School of Pharmacy in 1972, we are a regional poison center certified by the American Association of Poison Control Centers (AAPCC).

The first call you should make.

The MPC is the first place to call in the event of a suspected poisoning. Each year, poison specialists answer more than 38,000 calls about poison emergencies, animal exposures, and information requests. We are available 24 hours a day, 7 days a week to provide you with safe, effective emergency treatment advice and we are also here to answer any non-urgent questions you might have about poisons.

A team of experts ready to help you.

When you call us, you can be assured that your situation is in the hands of the most qualified, highly trained healthcare professionals. The MPC is staffed at all times by licensed pharmacists and nurses—all with additional training in clinical toxicology (the study of poisons). Each specialist is certified by the AAPCC as a certified specialist in poison information. In addition, board certified clinical and medical toxicologists are available for consultation 24 hours a day.

Poison Experts just a phone call away! Saving Lives...Saving Dollars

Educational resources for everyone.

Our services stretch beyond emergency treatment advice. We are committed to providing the latest poison prevention and treatment information to both the public and healthcare professionals. The MPC provides free information sheets, newsletters, and blogs on poison prevention and awareness.

For the public:

Our educational resources are designed to help increase the awareness of potential poisons and what to do if a poisoning occurs. To reinforce this message, our health educators offer poison prevention training courses to healthcare students, community organizations, and local health coalitions. Materials such as stickers and magnets displaying the nationwide poison help phone number are available. Everyone is encouraged to program 1-800-222-1222 into their mobile phones. This number will connect you to a regional poison center anywhere in the United States.

For healthcare professionals:

Our specialists continuously provide training on overdoses, poisonings, and a variety of other topics to pharmacists, physicians, nurses, and paramedics. Programs are offered as in-services, grand rounds, and other presentations. Healthcare professionals visit our facility for onsite training to see firsthand how a poison center operates and for in depth training on various toxicology topics.

In addition, we have a two-year fellowship in clinical toxicology for pharmacists that provides them with the experience and education needed for career opportunities in poison centers and emergency medicine. The healthcare professionals in healthcare facilities who treat poisonings and overdoses often call us for up-to-date treatment information. We maintain extensive resources on poisonings, including computer databases and toxicology books.

Saving dollars while saving lives.

While saving a life is absolutely priceless, the MPC saves money by managing approximately 60% of all cases safely and inexpensively at home. We prevent an estimated 15 to 30 million dollars in unnecessary emergency department costs each year. And for every dollar spent on poison center services, at least \$13.69 is saved in overall health care costs.

A number to remember.

1-800-222-1222

For non-English-speaking callers we use an interpreting service to translate information and instructions over the phone in 240 languages.

We have the ability to handle calls from deaf and hard of hearing callers with Maryland Relay (711).

For administrative issues, such as information about our educational programs, please call 410-706-7604 between 9:00 a.m. and 5:00 p.m., Monday through Friday. To order educational materials, please go to our website: www.mdpoison.com.
